

ELECTRIC VEHICLE (EV) CHARGER GUIDELINES

Rogue Valley International-Medford Airport (MFR) has installed new Electric Vehicle (EV) chargers in the short-term parking lot on the North side of the lot. The spots are clearly marked and reserved for electric vehicle use only.

AVAILABILITY & USE OF EV CHARGERS

1. The use of these EV chargers will be available in the short-term parking lot for the use of the general public for battery electric vehicles (BEV) and plug-in hybrid electric vehicles (PHEV).
2. MFR reserves the right to initiate, reduce or increase usage fees at any time.
3. The use of EV chargers is available on a 'first come, first served' basis.
4. MFR does not guarantee that EV chargers will be available or functioning at all times. Please ensure your vehicle is safe and eligible to be connected to an EV charger with no pending or outstanding manufacture recalls.
5. Charging equipment must be used responsibly and at the vehicle owner's risk.
6. When a vehicle is plugged in, any excess cable should be neatly coiled and kept out of walkways as much as possible to avoid causing tripping hazards.
7. Users must ensure that the charging cable has been properly coiled and hung or auto- retracted when the EV charger is unplugged from their vehicle.
8. Users may not use any electrical equipment that is or appears to be in disrepair.

In the event of an emergency, call 911 immediately and maintain a safe distance until help arrives.
